Vol. No. 22 -- 21

WHAT THE URANIUM ONE "SCANDAL" MIGHT MEAN (I HOPE!)

Conservative Republicans and even many a Bernie Sanders supporter have been properly beating the Clinton family (primarily, the most recent member of that pair to run for the presidency) about the head of late. **The really big new political revelation came courtesy of that white supremacist and "deplorable" Donna Brazile** (That's what we're supposed to call anyone who opposes Hillary Clinton, right?) No need to repeat what's in Brazile's bombshell book here, as you're hearing a lot about it; and properly so. Perhaps now Hillary will FINALLY take her ridiculous book and "woe is me; I should be QUEEN!" act and simply go away.

As much as I am one of the last people to want to defend this woman, though, I must say a few words about **uranium**. Specially, American uranium. And more specifically still, the quite exaggerated claim from the Trump Administration, down to *Faux (Fox) News* and those whose appropriate dislike for (and distrust of) Mrs. Clinton means they too can be guilty of spreading stories that aren't really true.

The hot topic prior to Brazile's book for Clinton-bashers had once again become the Uranium One "scandal" of late. **The oversimplified (and embellished) version is this:** Greased by generous speaking fees paid to her husband as well as by big donations to the Clinton Foundation by interested business parties led by mining/investment magnates Ian Telfer and Frank Giustra, Hillary Clinton oversaw the giving away of 20% of the U.S. domestic uranium supply to *Russia*. This benefitted the investors and the Clintons in this "pay for play" gambit; but greatly imperiled the "homeland."

And in the *most* asinine take I've heard on this yet--according to *Fox's* Judge Jeanine--**if it had been up to Hillary Clinton, this pundit might be dead.** "For me, it's personal," Ms. Pirro said, suggesting *she and many other patients could die from a lack of nuclear medicine-based diagnosis and treatment (Pirro has been a*

cancer survivor.) She REALLY said this folks; check out the recording at <https://www.youtube.com/watch?v=qa7Blk8rCRs>.

Essentially the story is FALSE; at least, the above WILD exaggeration. While in New Orleans, among those I visited with was **Energy Fuels'** V.P. Curtis Moore, who agreed that the standard line is very much embellished. There has *not* been the transfer of 20% of America's physical uranium supply to Russia. Not a single medical patient in the U.S. has been imperiled. By far the VERY best analysis of this subject came not from the loony Judge Jeanine, but from Marin Katusa of Katusa Research. For those of you who want the FACTS, I urge you to read <https://katusaresearch.com/untold-story-clintons-uranium-corruption/>

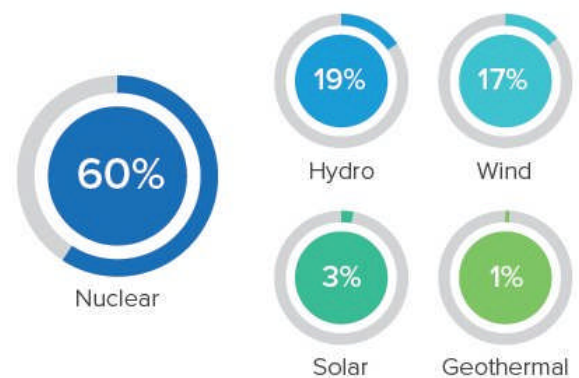

Is it a LAUGH RIOT that Hillary Clinton is being hoist on her own "The Russians are Coming!" petard? You bet it is. *Delicious.* And so, too, is seeing some of her long-suffering sycophants and apologists finally with no choice but to abandon her, her sociopathy and her many lies. But folks, there's no reason--with so much of substance and fact against her--why those who are dancing on Hillary Clinton's political grave need to essentially make up dirt. There's plenty real dirt that does exist.

One benefit, I guess, is that this "scandal" seems to be galvanizing administrative and political support which should help America's uranium producers. And this comes at a time when--at long last--CLEAN nuclear power is being embraced even more.

India and China you know about. Japan is about to re-start additional reactors. And as I write this, France is abandoning its previously-announced plans to cut the share of its national needs fueled by nuclear energy. Here, the Rick Perry-led Energy Department has been slow to get its act together and to actually hit its stride on policy. But Moore and a couple others I have spoken with are increasingly hopeful that, specifically, U.S.-based production is about to be reinvigorated; and this as the lid that has kept the spot uranium price fluttering around \$20/pound seems less firm.

So while the Uranium One story is *mostly* nonsense, maybe it's going to help push things in a positive direction, and galvanize renewing support for our own domestic uranium industry.
